Introduction

The Philippines always experiences natural disasters such as typhoons, heavy rainfall, earthquakes, and volcanic eruptions. These natural disasters cause suspensions of class to ensure the safety of students and school personnel. However, students and residents experience late announcements or suspensions of class, and unclear information causes bother to students and residents because, they receive the suspension of classes when they already left their house. (GMA News Online, 2024).

To address this, the Department of Education (DepEd) has issued multiple guidelines on suspension of classes, including DepEd Order No. 022, s.2024 and earlier directives such as DepEd Order No. 59, s.2003. These guidelines mandate that class suspensions must be declared by the local government units (LGUs) depending on the severity of local conditions (Department of Education, 2003). These problems depend on how the information can be sent immediately to residents and students and how true it is, so that it does not cause inconvenience to residents and students

In many cases, most LGUs use FACEBOOK or broadcast radio to deliver announcements about the suspension of classes in different parts of the Philippines, this is very helpful but most of it is fake news. This is also what residents and students fear that the information they received or read might be wrong. These gaps highlights the need for a more systematic, centralized, and transparent platform that will provide accurate and timely information about class suspensions.

Accordingly, the proposed (C-SAS) Class Suspension Advisory System will provide an online platform where LGU officials along with barangays, municipalities, and provinces can post class suspension announcements. These announcements can be seen by residents who can filter by province, municipality, and barangay, residents and students are not required to log in. By posting and accessing announcements, the system will help reduce doubts about whether announcements are true or not, avoid misinformation, and speed up coordination between LGUs and communities in each province.

The implementation of C-SAS is not only a technological advancement or improvement but also a response for more consistent and timely suspension announcements and to avoid false information, because teachers, parents, and local stakeholders want a more transparent system during disasters (Philstar, 2025).

Objectives of the Study

The purpose of this study is to design and develop C-SAS (Class Suspension Advisory System), a web-based platform that can help Local Government Units (LGUs) to quickly and efficiently announce class suspensions to avoid residents and students from doubting whether it is right or wrong. Through our system, it is easier for LGUs to immediately announce it to provinces, municipalities, and barangays. The system aims to:

1. **build a consistent platform** where LGUs in the province, municipality, and barangay directly post class suspension announcements.
2. **To provide residents with real-time access** to suspension information that can be filtered by location (province, municipality, barangay).
3. **For residents and students** there is no need to sign up and log in to access it.
4. **Develop a secure login system** for LGU officials, and only authorized administrations can post announcements.
5. **To avoid misinformation and great inconvenience** for residents and students, and the only website they can access is official for announcements and not just Facebook post that we don't know if it's true.
6. **To build transparency and accountability** by recording and managing all announcements posted by LGUs in the database.

Scope and the limitation of the study

The proposed C-SAS (Class Suspension Advisory System) was made to use it in a way that can deliver fast and reliable announcements regarding the suspension of classes in different provinces in our country, only LGUs officials can post announcements in this system, such as provincial, municipal, and

barangay officials and they can log in safely. Residents and students can access it anywhere in our country by filtering announcements based on their province, municipality, and barangay so that the announcement they see is in their area. And with this system residents and students do not need to log in to access it, to ensure that they can access it easily all announcements and LGU login credentials will be stored in a centralized database to ensure data consistency and reliability. For its very first deployment, the system can be accessed by posting an announcement on facebook and the website link of the announcement will be presented there to go to the website itself and see the full information. It only focuses on announcing the suspension of the class and nothing else.

However, this system has limitations. This system will not include other announcements that are not related to suspension such as barangay events and other announcements, this is only for class suspensions. Because it is limited, only LGUs officials have the ability to use this system. While the residents have the ability to see it. This system requires an internet connection to access the announcements that will be shared by the LGUs, and this system is a pure webbased system. Lastly all announcement depends on the fast and accurate information and updating of LGUs.

Significance of the study

The development of the C-SAS (Class Suspension Advisory System) is significant because it meets the needs of residents and students for a platform that is reliable and centralized to announce the suspension of classes in different provinces in our country. The announcement by a few unauthorized people on social media causes great inconvenience to residents and students deal with confusion. By creating a system where only officials of LGUs can post an announcement, it is ensured that it is true at authorized. Ensuring that this study can serve students and residents with appropriate information for suspending classes.

Students and Parents. This system offers a smooth and fast way to determine if an information about a class suspension is true, to avoid the spread of false information and not to cause confusion to everyone.

Teacher and School Administrator. It provides a reliable reference that helps them prepare and adjust their schedules accordingly.

Local Government Units (LGUs). The system strengthens transparency and accountability by giving them a digital tool to quickly and directly convey

important information to their constituents, so that they no longer rely on anyone and any announcement on social media.

Future Researchers and Developers. The study can serve as a foundation for the development of similar e-governance platforms that improve the dissemination of information in different sectors.

Tools to Use for the Development of the System

To develop the C-SAS: Class Suspension Advisory System, a combination of programming tools, frameworks, and design platforms will be used:

Programming Languages

- Java – for backend development, system logic, and database connection
- JavaScript – for frontend interactivity and dynamic functions
- HTML – for structuring webpages
- CSS – for styling and layout of the user interface

Database

- MySQL – for storing announcements, user credentials, and location data (province, municipality, barangay)

Development Environment

- Visual Studio Code (VS Code) – as the main code editor and debugging platform

Version Control

- Git / GitHub – for project version control, collaboration, and documentation

Deployment

- Web Server – to host the system and make it accessible online for residents and LGUs

End-User Tools

- Smartphones – for residents to access the system using mobile browsers
- Desktop or Laptop Computers – for LGU officials to log in and manage announcements
- Web Browsers – such as Google Chrome, Mozilla Firefox, Microsoft Edge, or Safari
- Internet Connection – required to access announcements in real-time

Appendix B: Hardware and Software Specifications

Hardware Specification	
BARANGAY AND LGU's	
Minimum	Recommended
Intel core i3 3 rd generation	Intel Core i5 7th Generation or
Memory: (RAM) 4GB	Memory: (RAM) 8GB or Higher
Storage: 500 GB HDD	Storage: 256GB SSD or higher
Internet connection: at least 5mpbs	Internet connection: at least 10-20 mbps
RESIDENT AND STUDENT	
Minimum	Recommended
Smartphone: Android or IOS	Smartphone: Andorid 11 or IOS 14
RAM: 2GB	RAM: 4GB
Storage: 16GB	Storage: 34GB or Higher
Internet connection: at least 3G or higher	Internet connection: at least 4G/5g or Wifi

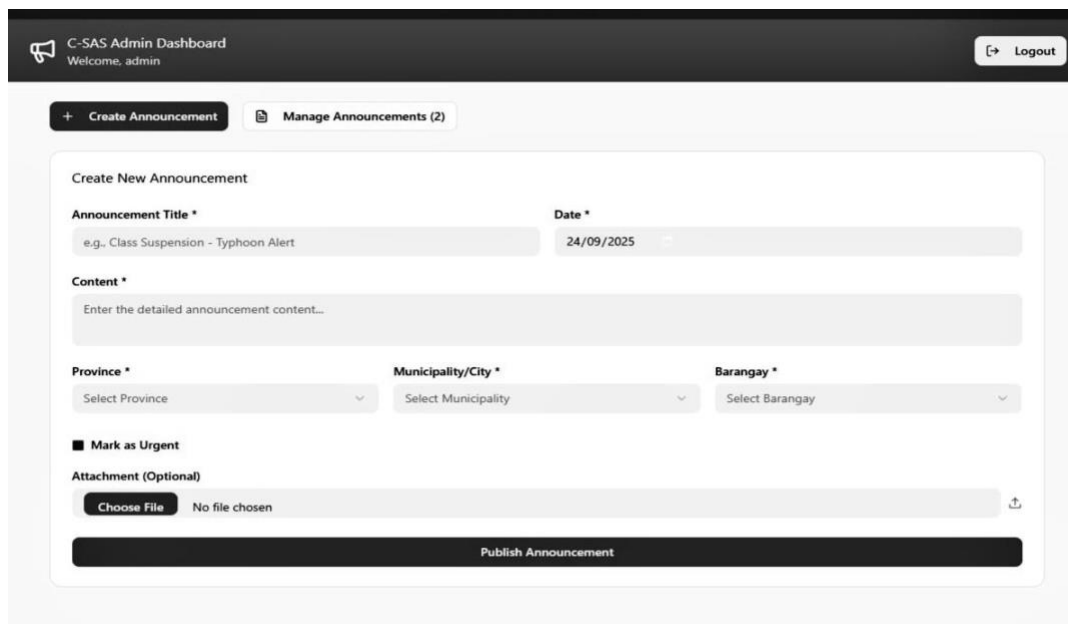

Appendix C: System Architecture

Appendix D: UI Mockup

The image shows a login form for the C-SAS Admin Portal. At the top, there is a megaphone icon, the text "C-SAS Admin Portal", and the instruction "Login to manage class suspension announcements". Below this is a box titled "Official Login" with a lock icon. Inside the box, there are fields for "Username" (with placeholder "Enter your username") and "Password" (with placeholder "Enter your password"). A "Forgot Password?" link is located to the right of the password field. A large "Login" button is at the bottom of the box. Below the box is a link with a left arrow and the text "Back to Public Announcements".

Figure 1. This is where authorized LGU's and Barangay officials can log in.

The image shows the "Create New Announcement" form in the C-SAS Admin Dashboard. The dashboard header includes "C-SAS Admin Dashboard", "Welcome, admin", and a "Logout" button. Below the header are two tabs: "Create Announcement" (active) and "Manage Announcements (2)". The form fields include: "Announcement Title *" (with placeholder "e.g., Class Suspension - Typhoon Alert"), "Date *" (with value "24/09/2025"), "Content *" (with placeholder "Enter the detailed announcement content..."), "Province *" (dropdown "Select Province"), "Municipality/City *" (dropdown "Select Municipality"), "Barangay *" (dropdown "Select Barangay"), a "Mark as Urgent" checkbox, and an "Attachment (Optional)" section with a "Choose File" button and "No file chosen" text. A "Publish Announcement" button is at the bottom.

Figure 2. Creating announcement and publish.

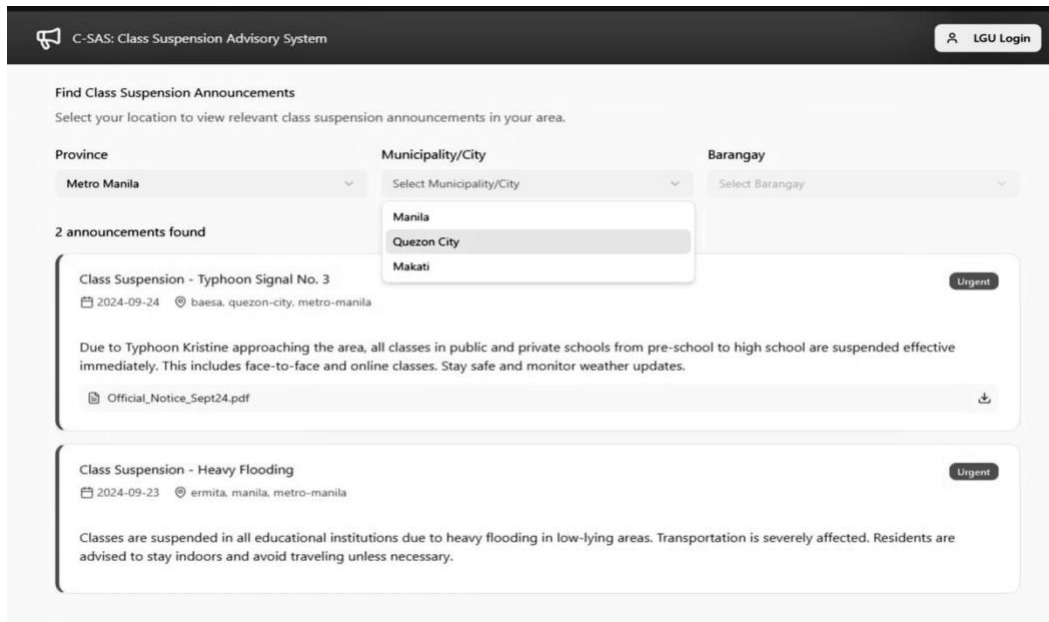

Figure 3. Resident and students can filter by their respective places.

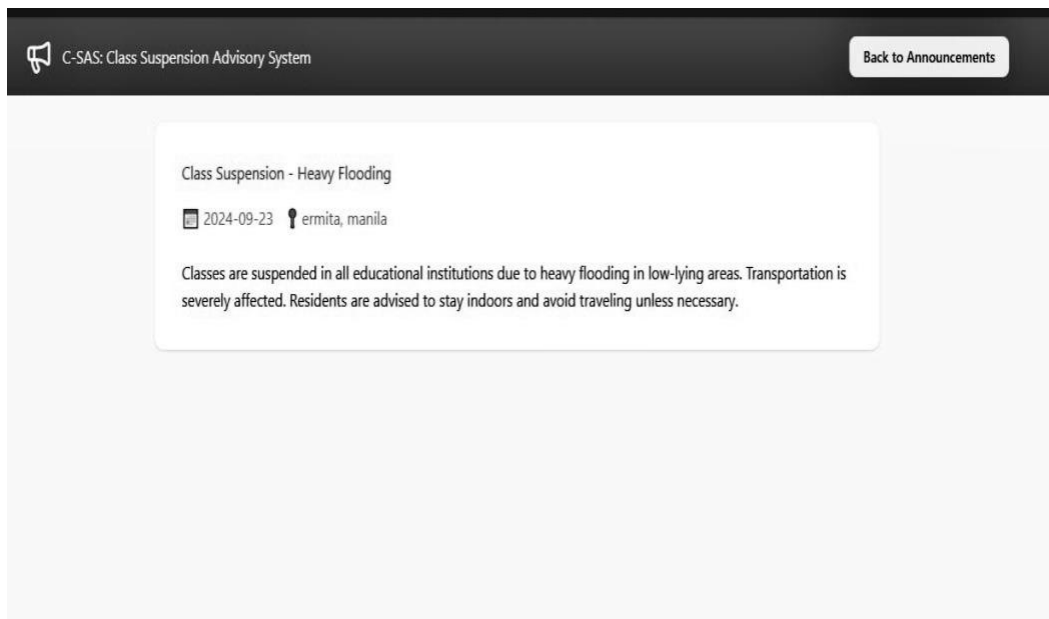

Figure 4. Example of announcement.
